

8 Phytonutrient-Rich, Science-Backed Herbs

- Chrysin
- Coriolus Versicolor
- Quercetin
- Diindolylmethane (DIM)
- Indole-3-Carbinol (I3C)
- Curcumin
- Selenium
- Green Tea
- Resveratrol

- Helps protect the immune system*
- Promotes all-around functional health*
- Strengthens body's resistance capabilities*
- Plays vital role in functioning of immune system*
- Supports preventative maintenance approach to health*

Immune Defense for the Whole Family

What if chronic disease and illness weren't the norm?

Why AID?

- ✓ Enhance body's defense abilities*
- ✓ Contains 8 natural herbs*
- ✓ Up to 94% absorption rate*
- ✓ Advanced ingredient layering*
- ✓ Nitrogen cooling for phytonutrient protection*
- ✓ Science-backed premium herbs*
- ✓ Safe for kids*
- ✓ Manufactured in the USA*

"Good health starts with the immune system."

The immune system is the body's first line of defense in maintaining health, preventing illness, and hastening recovery. A weakened immune system leaves us vulnerable to enemies of good health. Research suggests that supplementing the immune system can be effective in increasing the body's ability to resist negative influences.

Free radicals are organic atoms or molecules that have an unpaired electron in their outer cellular ring. Since electrons have a tendency to exist in pairs, free radicals become unstable and latch on to electrons from other atoms and molecules in your body. This cycle creates a biological chain reaction that can damage cell membranes, accelerate the aging process, and contribute to certain ailments. Stress, lack of sleep, a poor diet, UV radiation, exercise, and pollution can all contribute to the formation of free radicals.

AID is the most advanced, natural approach to supporting a healthy immune system available anywhere in the world. AID is the most powerful immune system product with 8 herbs, 30 actives, and up to 94% absorption rate due to the proprietary liposomal matrix, layering of ingredients, and nitrogen cooling processes.*

Antioxidants are molecules capable of preventing free radicals from damaging healthy, functioning cells. By donating an electron to these unstable molecules, antioxidants help terminate this chain reaction before crucial damage occurs. Though your body inherently creates some antioxidants, these life-protecting phytonutrients are generally found in richly pigmented fruits and vegetables.

Our sole focus is on developing the right mix and blend of nutrients and organic ingredients that support a healthy immune system that effectively combats free radicals and fortifies the immune system when exposed to toxins that weaken it.
